

I.

- 1/ One state
- just one line  $\oplus$  info
- 2/ Global - calculate the winner and set stroke as function of RD-Diff

- Advantages:
- + compact view
  - + based on time series
  - + intuitive
- Disadvantages:
- high load on the client side
  - require appropriate width

II.

- stacked line-chart
- For different views we can use median for the whole country and specific values for selected state
- Advantages:
- + easy to implement
  - + looks good
- Disadvantages:
- hard to understand
